

HTTP protocol is common language where client and server can understand each other.
Rules for communication

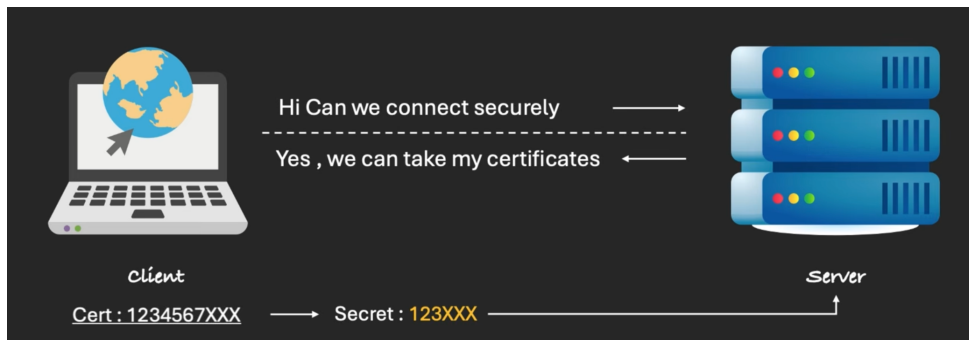

Request will travel over internet.

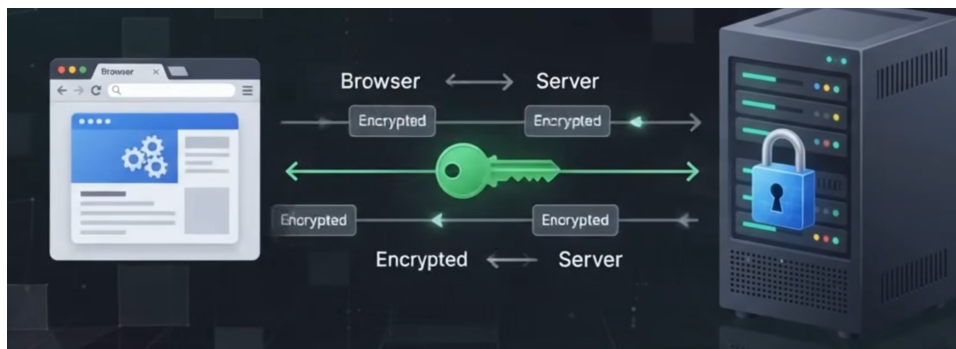

What if someone capture request

With help of secret key everything is encrypted. Message transfer securely.

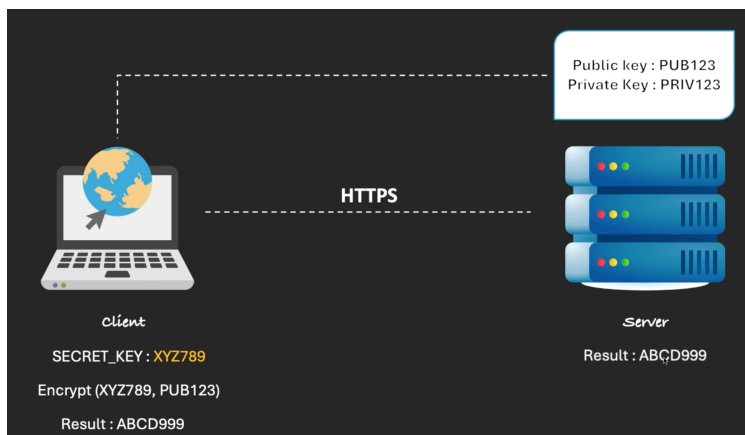

Step1: Server send public key and private key to client.

Step2: Client generate random secret key

Step3: Browser uses public key and encrypt secret key

Step4: As a result, client generate encrypted key and send it to server.

Step5: server decrypt the number using its private key.

Step6: server get secret key generated by client.

Step7: server and client used this secret key

Communication happens with secret key going forward.
